Document	Business Banking Phone Agents: Weave Design
Version	1.0, draft for review
Prepared by	Tetherfi Product Management
Prepared for	OCBC Business Banking project team
Status	Design complete; items marked **Proposal** and the open questions in section 21 await the bank's confirmation
Source documents	The bank's IVR call flows, listed in section 2

1. Executive summary

Both call-flow packs (the Singapore BBCSC IVR, version 47, and the Malaysia business and consumer hotlines) run on Weave as **6 agents with 21 specialists in total**. Each agent answers one family of phone numbers. Inside it, a front-desk specialist hears what the caller wants in plain words and hands the call to the specialist for that job.

Callers no longer walk a keypad tree. They say "What's my balance?" and the agent replies "Sure. I need to verify your identity first." That happens because every tool that reads or changes account data has a precondition: it refuses to run until the verification task has marked the caller as verified. The keypad still works everywhere. Phone codes, PINs and one-time passwords are taken as keypad tones, never spoken aloud and never shown to the AI model.

2. Scope, sources and conventions

This document covers the agents and specialists, the call path, verification, every menu option mapped to a tool, the main menu and keys, access by login type, account selection, the rules of every service, the Malaysian hotlines, hours and hand-over, errors, languages, after-call records, the build steps in the studio, testing, what the bank's systems provide, and a catalogue of every numbered prompt.

How to read this document. Facts taken from the call flows give their page: "p. N" is the SG pack (BBCSC call flow v47); "MY pack pp. N" is the second PDF. Anything marked **Proposal** is our own design choice, estimate or suggestion. It is not in the call flows, and the bank should confirm it.

Source documents

Ref	Document	Pages	Cited as
S1	BBCSC IVR Call Flow, 15 Jul 2015, version 47 (English, Avaya, ITSR1)	1–48	"p. N"
S2	SGBB, MYCFS and BB IVR Call Flows	1–56	"MY pack pp. N" for pp. 49–56

Two copies of S1 were supplied; they are identical. Pages 1–48 of S2 are the same Singapore flow as S1, and pages 49–56 add the Malaysian hotlines, which the pack marks "subject to change as users have not finalised the same".

In scope

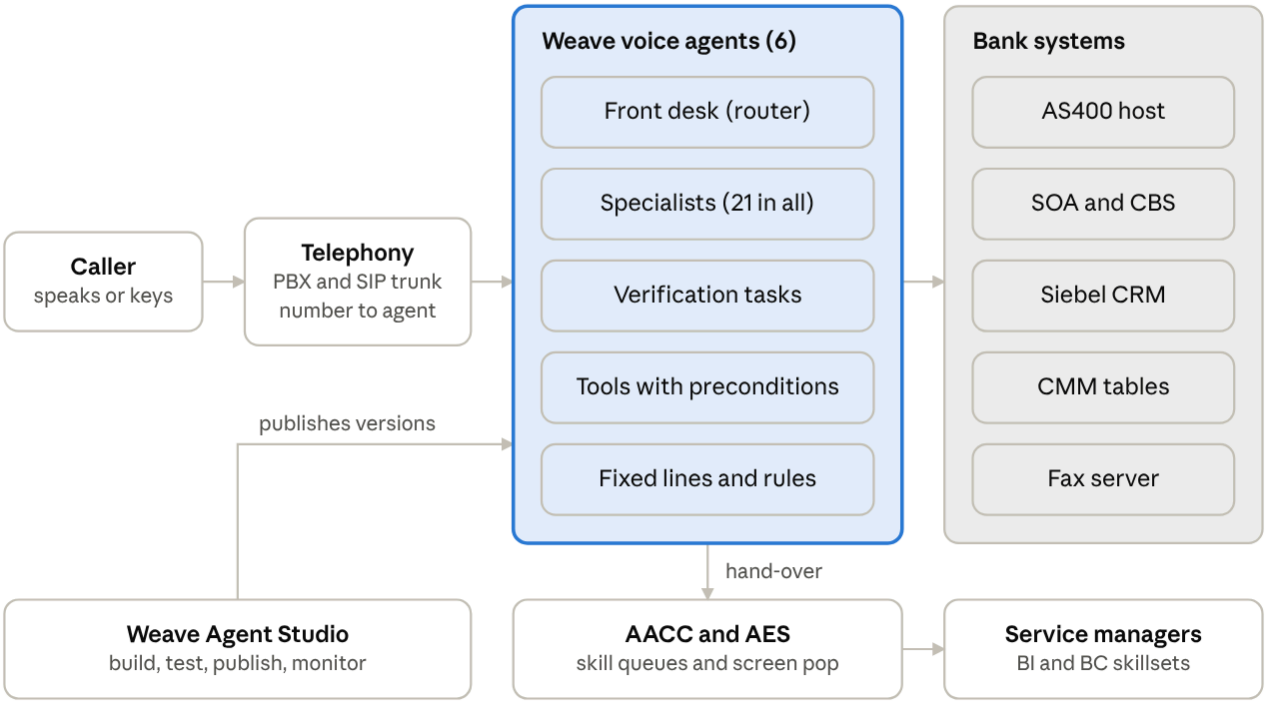

- Every Singapore Business Banking line: 6538 1111, 6538 2222 (VIP), 6586 5292 (Investigations) and the service manager survey.
- The five Malaysian hotlines: BB General, BB Islamic, BB Premier, CFS Mass and iQ, CFS Al-Amin.
- The agents, specialists, verification, services, hand-over, error handling, languages, after-call records, build steps, tests and integrations needed to run them on Weave.

Out of scope: changes to the bank's host systems, the AACC routing configuration itself, and the content of CMM tables, which stay with the bank.

3. Solution architecture

The solution has four parts: the bank's telephony, the Weave voice agents, the bank's systems, and the service managers.

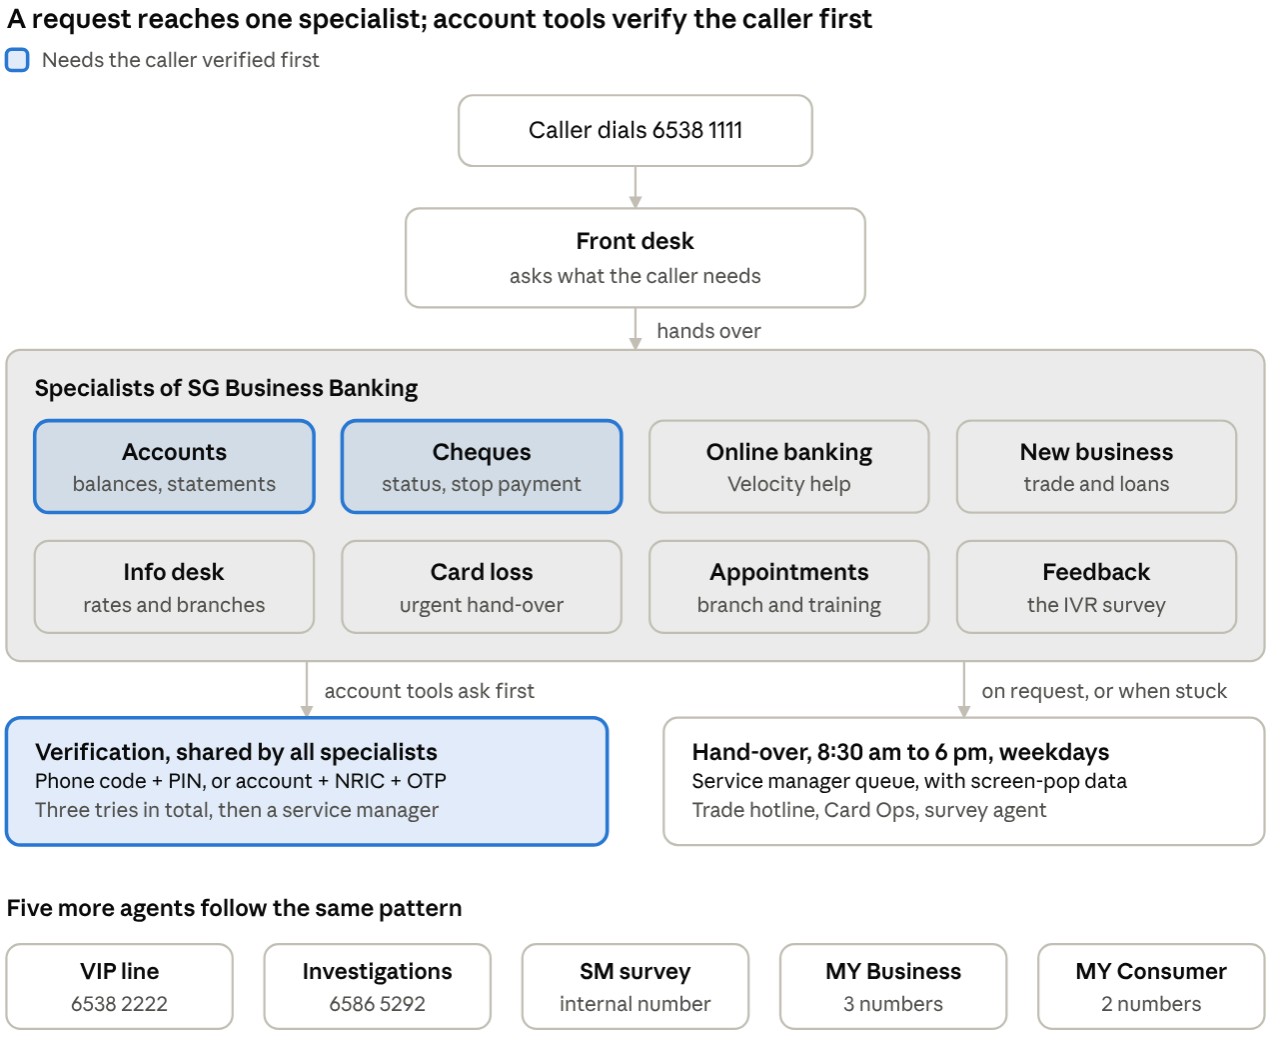

Calls pass through Weave to the bank systems and to people

Solution architecture · telephony, Weave agents, bank systems, service managers

The caller reaches Weave through the bank's telephony. Each agent works on the bank's systems only through its tools, over HTTPS through the bank's API gateway, and hands calls to service managers through AACC. Weave Agent Studio builds, tests and publishes each agent version.

4. Agent map

SG Business Banking · front desk, 8 specialists, shared verification and hand-over

One front desk hears the request and hands over to one specialist. Only Accounts and Cheques need full verification before they answer (Online banking, Card loss and Appointments check an account number); every specialist can hand over to a person while the centre is open.

5. Agents and specialists

The design uses **6 agents** (one per family of phone numbers) and **21 specialists** inside them. One agent per family keeps each line's greeting, hours and numbers separate. Specialists inside an agent share one verification, so the caller is verified once per call.

Proposal: splitting the service into 6 agents and 21 specialists is our design. The call flows define the menus and services; they do not say how the AI agents should be divided.

The six agents

Agent	Phone numbers	Languages	Specialists	Replaces (PDF pages)
SG Business Banking	6538 1111	English, Mandarin	9	SG pack pp. 1–30, 33–48
SG Business Banking VIP	6538 2222	English, Mandarin (set per VIP)	1	p. 31
SG Investigations	6586 5292	English, Mandarin	1	p. 32
SG Service Manager Survey	Internal number, reached only by an agent's transfer	English, Mandarin	1	p. 38
MY Business Banking	1300-88-7000 General, 1300 88 0255 Islamic, 1300-88-7200 Premier	English, Mandarin, Malay	5	MY pack pp. 51–56
MY Consumer (CFS)	1300 88 5000 Mass and iQ, 1300 88 0310 Al-Amin	English, Mandarin, Malay	4	MY pack pp. 49–50

The nine specialists of SG Business Banking

Specialist	Kind	Handles (old menu)	Needs verification
Front desk	Router (answers first)	Greeting, language, "how can I help", 3-digit service codes, favourite transaction	No
Accounts	Specialist	Balance, incoming funds, recent activity, statements, FD and loans (menu 1)	Yes
Cheques	Specialist	Deposited and issued cheque status, last cheque book sent, cheque book request, stop payment (menu 2)	Yes

Specialist	Kind	Handles (old menu)	Needs verification
Business Internet Banking	Specialist	Velocity forms, technical support, Payment and Trade module training (menu 3)	Account number only
New Business	Specialist	New account and facilities, trade, commercial property loan, foreign worker accounts, insurance (menu 4)	No (account check for bookings)
Info Desk	Specialist	Rates, promotions, forms by fax, branch locator, GIRO and SWIFT codes (menu 5)	No
Card Loss	Specialist	Lost corporate ATM card, unauthorised ATM withdrawal, SMS alerts (menu 6)	Account number only
Appointments	Specialist	Branch and training bookings, cancelling a booking (pp. 19, 45, 47, 48)	Account check
Feedback	Specialist	IVR survey, three rated questions (p. 37)	No

The phone PIN change (pp. 9, 10 option 6) is a task, not a specialist: Accounts and Cheques both offer it, as the old menus did.

Specialists of the other agents

Agent	Specialists
SG Business Banking VIP	VIP desk (standalone): office hours, VIP lookup, route to the last service manager, call-back
SG Investigations	Investigations desk (standalone): office hours, account number, route to the last service manager, call-back
SG Service Manager Survey	Survey desk (standalone): three questions on the service manager, BI and BC profiles

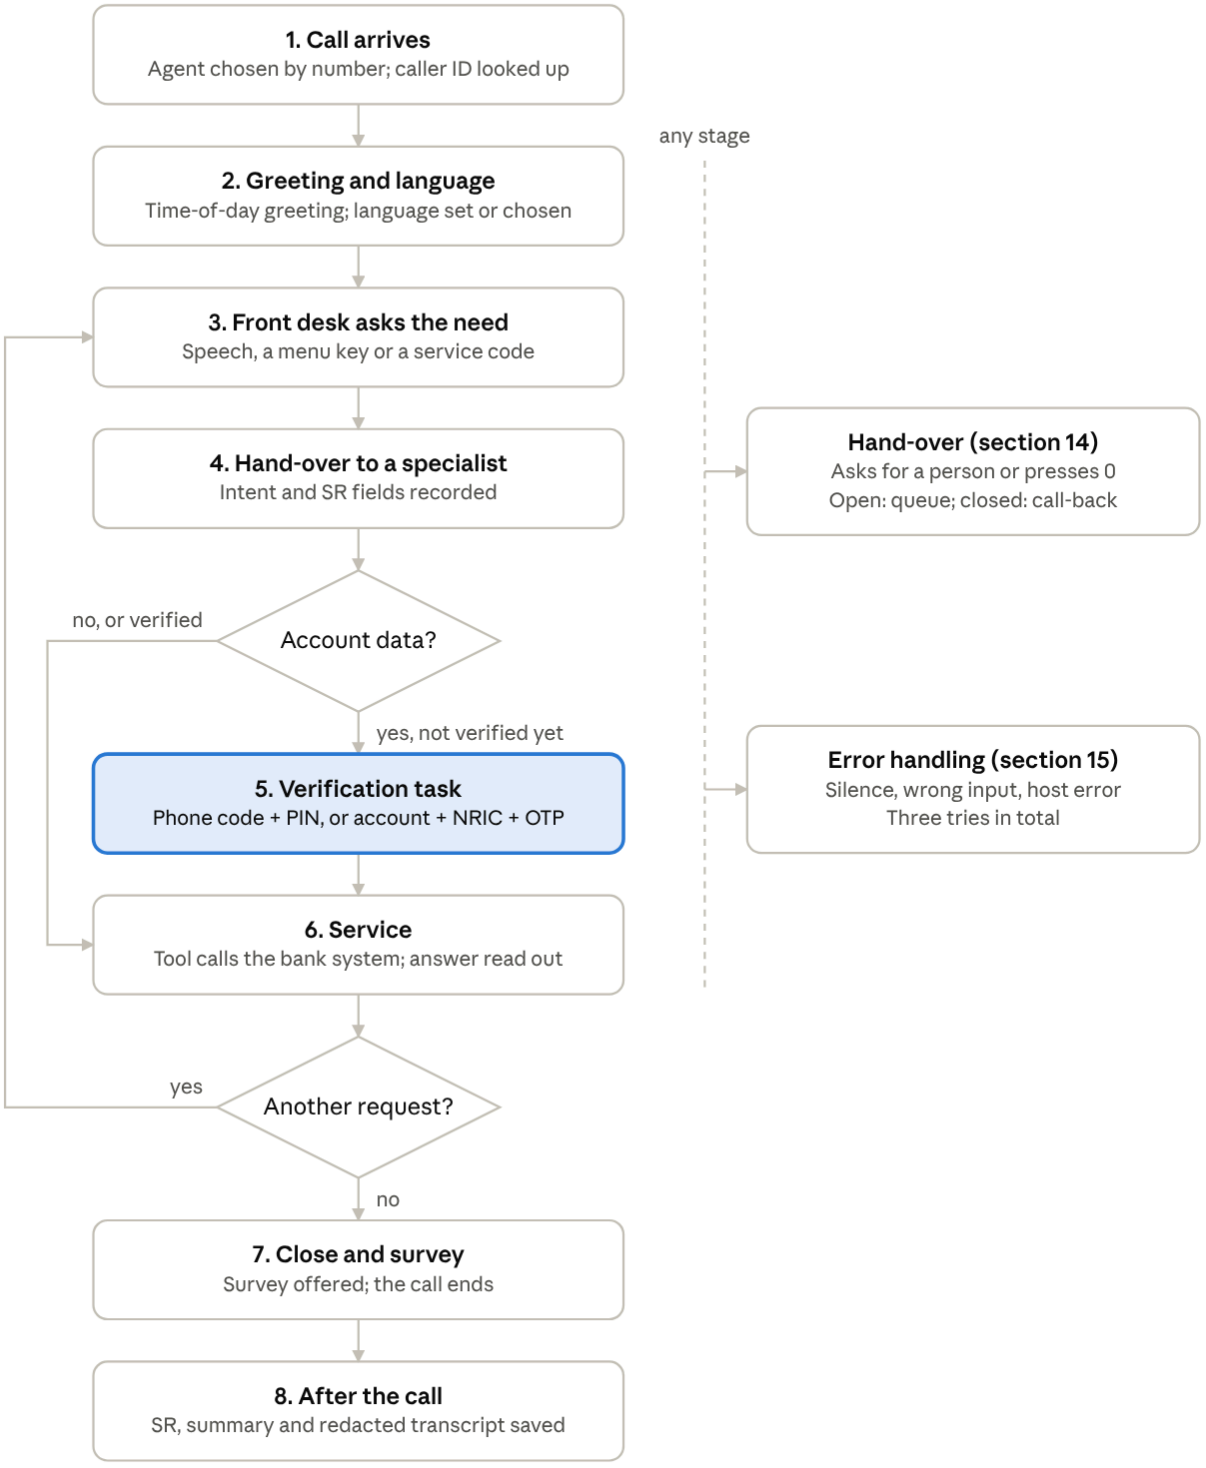

Agent	Specialists
MY Business Banking	Front desk (router), Accounts, Payments (own-account transfer, OCBC loan payment, FPX direct debit), Cheques, Info Desk (branches, forms, FX, deposit, FCY deposit, Islamic and prime rates). The Premier line greets, sets the language and transfers to an agent.
MY Consumer (CFS)	Front desk (router, with the iQ member path), Cards (balance transfer, fee waiver, credit limit, balance and statement, application status, activation), Banking (balance, cheques, statement, rates, branches, PIN change), Payments (own accounts, OCBC loan or financing, credit card, utility bills, interbank GIRO)

Shared pieces are configured once per agent and reused by its specialists: the two verification tasks, the account chooser, the hand-over to a service manager, call-back, the error and silence handling, and the fixed-line catalogue.

6. End-to-end call workflow

Every call, on every line, passes through the same eight stages. A request for a person, three failed tries or a system error can leave the flow at any stage, to the hand-over (section 14) or the error handling (section 15).

Every call follows eight stages; verification runs only when needed

End-to-end call workflow · eight stages and two exits

1. **Call arrives.** The dialled number selects the agent (section 5). The `call_started` hook reads the caller ID in CMM: preferred language, VIP entry, favourite transaction and any open call-back request.

2. **Greeting and language.** The time-of-day greeting (1001–1003) and 1004 play. The language comes from CMM, from the caller's choice, or from the language they speak (section 16).
3. **Front desk.** The front desk asks what the caller needs (1194). The caller speaks, keys a menu option or keys a three-digit service code (section 8).
4. **Hand-over to a specialist.** The front desk hands the call to the specialist for that service and records the intent and the SR fields.
5. **Verification gate.** A tool that reads or changes account data refuses to run until the caller is verified, so the specialist first runs the verification task (section 9). It runs once per call.
6. **Service.** The specialist calls the bank's system through its tool, reads out the answer and offers the next step, following the service's rules (sections 12 and 13).
7. **Next request or close.** Another request returns to stage 3 or 4 without a second verification. At the end, the survey is offered (section 17).
8. **After the call.** The `call_ended` hook writes the SR, the summary and analysis, and the redacted transcript (section 17).

7. Worked example: a balance enquiry

A verified balance enquiry takes about six turns. The caller never hears a menu unless they ask for one or stay silent. The table traces the user's example on the main Singapore line, 6538 1111, on a weekday morning.

Proposal: asking first and verifying only when needed is our design, as is the wording of the agent's free replies. The fixed lines keep their numbers from the call flows. The balances and account endings are made up for the example.

#	Caller	Agent says	What happens in Weave
1	(calls 6538 1111)	"Good morning. Welcome to OCBC PhoneDirect Service. How can I help you today?"	The `call_started` hook looks up the caller ID in CMM: preferred language, VIP flag, favourite transaction. The greeting is fixed line 1001, chosen by the time of day.

#	Caller	Agent says	What happens in Weave
2	"I want my account balance."	"Sure. I need to verify your identity first. Please key in your seven-digit phone code, then press hash."	Front desk hands over to **Accounts** with `intent = balance`. Accounts calls `get_balance`. The tool's precondition `verified = true` fails, so the model is told "verify the caller first" and starts the `verify_phone_code` task.
3	(keys 1234567#)	"Thank you. Now your six-digit phone PIN, then hash."	Keypad step: the digits go straight into the sensitive variable `phone_code`. The model sees `***`.
4	(keys PIN#)	"You're verified. You have two current accounts. Which one: the account ending 4821 or the one ending 9930?"	The PIN goes to AS400 User Login, then Get CIF. The task sets `verified`, `cif`, `access_level` and `accounts`. Two current accounts trigger the `choose_account` step.
5	"The one ending 4821."	"Your account balance is 12,480 dollars and 35 cents. Your available balance is 11,980 dollars. The difference is due to a hold amount of 500 dollars."	`get_balance` calls CBS-AcctDeptStaticBalance. Only the balance fields reach the model. The currency rule reads the amounts aloud as dollars and cents.
6	"That's all, thanks."	"Would you like to rate today's call? It takes three quick questions."	The service-request record is written with Type QUICKKILL, Category ACCOUNT SERVICES, Sub-category ACCOUNT BALANCES. The survey is offered (the old option 9).

What changes from the old IVR:

- **Order.** The IVR authenticated before showing the menu. Weave asks what the caller wants first, and verifies only when a task needs it. Rates, branches, forms and promotions never ask for verification.
- **One verification per call.** After step 4, the caller can ask for incoming funds, recent activity or a cheque status without verifying again. The task's `skip_if verified = true` ends at once.

- **Shortcuts still work.** Saying or keying a three-digit service code (for example 328) goes straight to that service. Pressing `*`, `8`, `9` or `0` keeps the old meaning: repeat, main menu, feedback, service manager.

8. Front desk: main menu, keys and service codes

The front desk replaces the main menu on p. 2. It keeps every behaviour the menu had.

Behaviour (p. 2)	In Weave
"Our system allows speech recognition in English" (or Mandarin), with background music, from CMM	Played after the greeting while speech recognition is available
"Please say the service you are looking for. For example, say 'Balance' or 'Cheque Deposited'. Otherwise, if you know the 3-digit service code, please say or enter it now" (1194)	The front desk's opening question
No answer or no match in 5 seconds	The menu is read: 1 balance, incoming funds and account activities (1007); 2 cheque services (1008); 3 Business Internet Banking (1009); 4 new account opening, trade, loan and insurance (1010); 5 rates, promotions, forms and branch location (1011); 6 loss of corporate ATM card, unauthorised ATM withdrawal or SMS alert enquiries (1012); "If you know the 3-digit service code, please enter it now" (1330); 0 for a service manager (2016), in business hours only
Speech recognition not available	Only keypad options and their announcements are offered; the speech announcement is not played
Favourite transaction (1242)	After 5 balance enquiries from the caller ID: "Your favourite transaction is Account Balance. To do the same say 'Balance' or press 1", 3-second wait, with music. CMM resets the count. The Sept 2005 BBCSC note asks for this level to be suppressible so callers reach the menu at once; it is a switch in CMM.

Behaviour (p. 2)	In Weave
Main menu timeout or invalid input	The three-tries rule (see section 15); 0 is not offered there

Keys that work everywhere

Key	Meaning	Fixed line
`*`	Repeat what was just read; on account lists, back to the previous menu (1298)	2029, 2011
`#`	More results (incoming funds 1300, activity 2034, cheques 1213), another request (statement 1334, stop payment 1335, issued status 1333)	2103
`7`	Back to the previous menu (cancel appointment)	1309, 2007
`8`	Back to the main menu	2015, 2008
`9`	Feedback on OCBC PhoneDirect (IVR survey)	2017, 2009
`0`	A service manager, in business hours	2016, 2010
`1`	After an answer: "For more account enquiries" (1032) or "For more cheque related services" (1055)	2001

Introductory messages and interruptions

- Every menu and service opens with an **introductory message held in CMM, played over background music** (pp. 3–48). The bank changes it in CMM without a new agent version. The statement request has none (p. 8), and the rates menu adds a second CMM message saying rates are indicative (p. 22).
- Whether the caller can interrupt an announcement is **set per announcement** ("Dynamic announcements & parameterize the interrupt", p. 1). In Weave each fixed line carries its own interruption setting.
- Promotions, the IVR survey and the GIRO and SWIFT announcement are also kept in CMM, so they change without a release (pp. 20, 21, 37).

Service codes (p. 29)

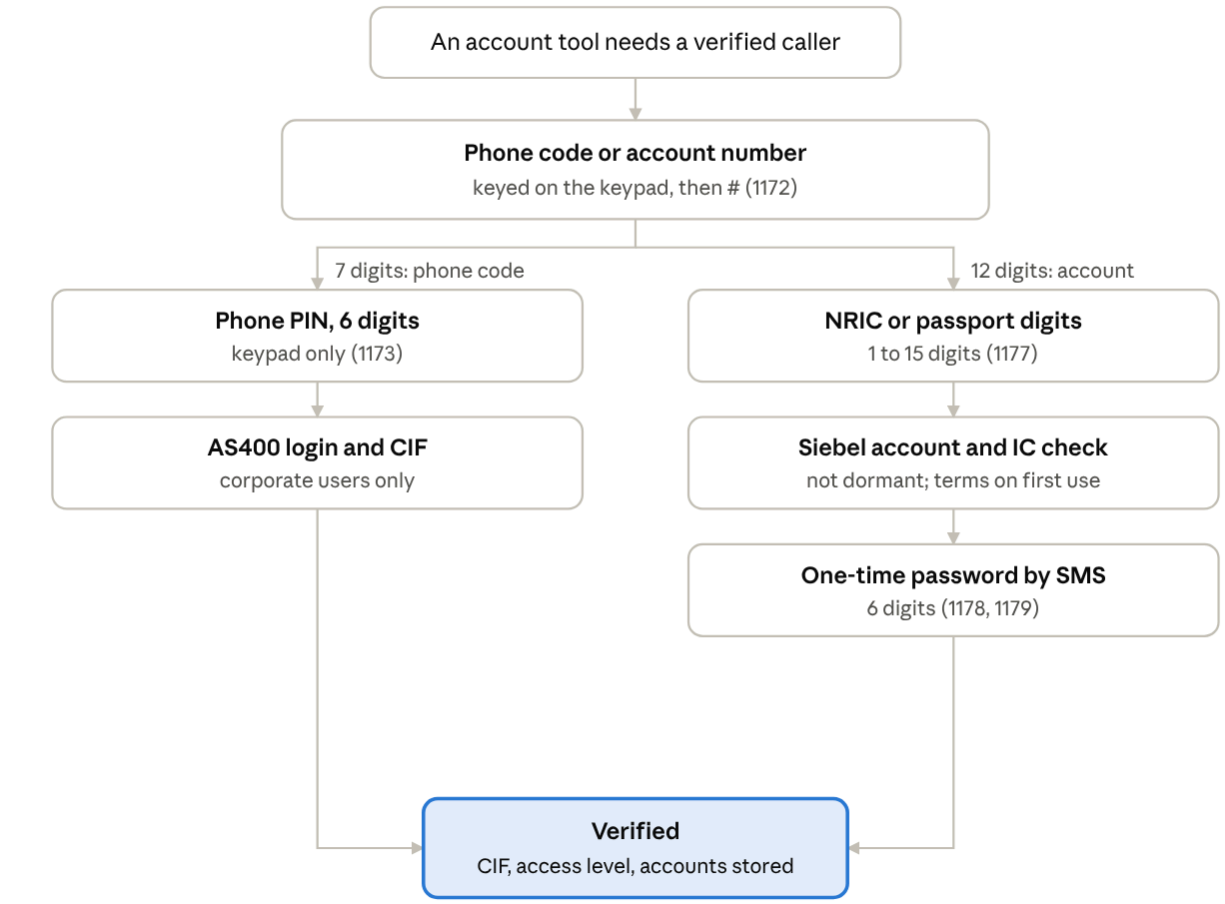

A three-digit code goes straight to its service. Today only **328** exists, and "other service codes can be added in the future" from CMM.

- 328 reads a menu built from CMM: Time Deposit and Loans (1163), Funds Transfer and Remittance (1165), confirm receipt of a facsimile transmission (1167), Account Enquiries (1166), plus 8 and 9. Each option transfers to the service manager and group mapped in CMM, after the account is collected and the customer's details fetched.
- Any other code: "This is an invalid campaign code", which counts as a try.
- Option 6 on the account menu (FD and Loan account) also jumps to this 328 menu (p. 3).

Each 328 option carries its own SR when the caller is transferred (p. 29): Time Deposit goes to the BC FD skillset (FIXED DEPOSIT / TRANSACTION (NEW)); Loans to the BC Loans skillset (LOAN / TRANSACTION (NEW)); rates to the BI skillset by customer segment (FIXED DEPOSIT / REQUEST FOR FD RATES, or FOREIGN EXCHANGE / INDICATIVE FX RATES (<S$40K)).

9. Caller verification

Verification follows the common module on pp. 33–34 exactly, as two Weave verification tasks that share one result. Each step is checked by the bank's own system in code, so the AI model cannot accept a wrong answer. Secrets go in on the keypad into sensitive variables: the model only ever sees `***`.

Verification · phone code path and account + OTP path

Once `verified` is true, every account tool in the call works without asking again. The caller ID remembers which path the caller used, so a phone-code caller is asked only for the phone code next time (p. 33).

Where verification stops

Situation	Host signal	Caller hears	Then
Wrong length entered	(checked by Weave)	The matching error line, for example 2074	Try again; counts as a try
Invalid phone code	83	2074, asked for the phone code again	Counts as a try
Invalid PIN	53	2046, asked for the PIN again	Counts as a try

Situation	Host signal	Caller hears	Then
Valid PIN, unauthorised user (bad CIF)	50	"Sorry, we are unable to proceed with your request" (1189)	0 for a service manager, 8 for the main menu
Maximum tries reached	62, or the third failure	2012, then "You may mail in your request for a new Phone PIN using the Corporate Electronic Services Update Form" (1175)	1 to request the form, 0 service manager, 8 main menu
Personal (not business) customer	Get CIF	"The correct number to dial is 1800 363 3333" (1221)	Goodbye (1161) after 6 seconds; the call ends
Invalid account number	invalidAcct = Y	2045	Back to the phone code question
Invalid NRIC or passport	invalidContact = Y	2053	Hand-over to a service manager
Dormant account	Siebel	"Please visit your nearest OCBC branch" (1327)	8 main menu, 0 service manager
One-time password locked	OTP host	"Your One-Time Password feature has been suspended"	0 service manager, 8 main menu
OTP service switched off	(setting)	Interim flow, p. 46	Hand-over to a service manager while open; call-back when closed

Further rules from the authentication module (pp. 33, 34, 46):

- The phone PIN is sent to the host encrypted. The pack suggests exploring speech for the phone code ("Explore to ask for Speech Rec in this menu", p. 33).
- The account + NRIC login is for business banking customers only; Siebel checks both numbers together.
- The IVR never sends an OTP it already knows is invalid to the host, so the "suspended" message is in practice not played (p. 34).

- With OTP switched off (p. 46), a successful account + NRIC login goes straight to a service manager while the centre is open; when it is closed, the caller hears 1190 and can ask for a call-back or return to the main menu.

Changing the phone PIN (p. 9)

The `change_phone_pin` task needs a phone-code login and runs once per call. It asks for the current PIN, a new 6-digit PIN that differs from the old one, and the new PIN again. It then calls AS400 User Login and Phone PIN change. On success the caller hears 1043 and 1044. A second change in the same call is refused with 1039.

10. Access by login type

Menus stay dynamic, as the call flows require ("Access to menu options depends on the customer's access level and account profile", pp. 3, 10). The transaction bitmap (service bucket) is not checked.

Service	Allowed when (pp. 3, 10)
Account balance	Phone code (P) or AS, with a CA or ACU, user type Corporate
Incoming funds	P, AS or AC, with a CA or ACU, user type Corporate
Recent account activity	P, AS or AC, with a CA or ACU, user type Corporate
Statement request	P, AS or AC, with a CA or ACU and at least one CA (minus M)
Change phone PIN	Phone-code caller only (P); on the cheque menu, CA or ACU only
FD and loan account	OTP login with the BizConn indicator (AS+BC or AC+BC)
Deposited cheques	CA or ACU, or AS / AC
Issued cheques, cheque book sent	CA or ACU-CHQ, or AS / AC
New cheque book, stop cheque payment	CA or ACU-CHQ, or AS only
M0 transfer (key 0 on the account menu)	Any

Three menu sets are built for the account menu (P, AS, AC) and four for the cheque menu (P+CA, P+ACU, AS, AC). An ACU call account has no cheque options 2 to 5.

The PDF is not consistent for statements: the access box on p. 3 says P, AS or AC, but the menu line says "P or AS only" (1016). This is listed under Open questions.

11. Choosing an account

Only current (CA) and foreign currency (ACU) accounts are offered.

1. One account: no list and no question. With AS or AC and one account in several currencies, the caller is asked the currency first.
2. Accounts of both types: "For current account, press 1 (1225); for foreign currency account, press 2 (1226)", or 8 for the main menu.
3. Several of one type: "You have {{n}} current accounts" (1227) or "foreign currency accounts" (1228), then "Please enter your 12-digit account number (1087), or (2023) press the # key to list your account numbers (1019)".
4. The list reads "For account number (1052) {{number}}, press n", up to 8 a page with "For more accounts, press 9" (1216) when there are more than 9; `*` returns to the previous menu (1298).
5. An account not tagged to the phone code, or not valid: "The account number is invalid", and the caller is asked again.
6. ACU with both call and checking accounts: "For call account, press 1 (1231); for checking account, press 2 (1232)". Then CBS-ListCABalance lists the currencies: "For {{currency}} account, press n", 9 for more.

Proposal: in Weave the caller can also just say "the one ending 4821" or "my US dollar account"; the numbered list stays for keypad callers.

12. Service catalogue: every menu option mapped

Each IVR leaf becomes one tool on one specialist. The tool calls the same back-end service the IVR called. Its precondition decides whether verification comes first. When the call goes to a service manager, its service-request (SR) fields travel with it. Every SR below has Type QUICKKILL unless marked otherwise.

SG Business Banking (6538 1111)

Old option	Specialist	Tool	Back-end call	Verification	SR category / sub-category
1-1 Account balance	Accounts	`get_balance`	SOA CBS-AcctDeptStaticBalance	Phone code (P) or AS	ACCOUNT SERVICES / ACCOUNT BALANCES
1-2 Incoming funds	Accounts	`list_incoming_funds`	SOA CBS-IncomingFundTransaction	P, AS or AC	INWARD REMITTANCE / STATUS OF INCOMING FUNDS
1-3 Recent account activity	Accounts	`list_recent_activity`	SOA CBS-CASAHistory-I	P, AS or AC	ACCOUNT SERVICES / DEBIT/CREDIT TXN
1-4 Statement request	Accounts	`request_statement`	SOA Statement request (45), Siebel SR	P or AS	ACCOUNT SERVICES / COPY OF STATEMENT (C/P/I)
1-4-4 Earlier statements	Accounts	Hand-over `service_manager`	AACC transfer	P or AS	ACCOUNT SERVICES / COPY OF STATEMENT - EXTG
1-5, 2-6 Change phone PIN	Accounts, Cheques	Task `change_phone_pin`	AS400 User Login, Phone PIN change	P only	PHONEBANKING / T-PIN RESET
1-6 FD and loan account	Accounts	Hand-over `fd_loans` (service code 328)	AACC transfer to BC	AS+BC or AC+BC	FIXED DEPOSIT or LOAN / TRANSACTION (NEW)
1-0 M0 transfer	Accounts	Hand-over `service_manager`	AACC transfer	Any	By segment
2-1 Deposited cheques	Cheques	`list_cheque_deposits`	SOA 3090 SA/CA, Incoming Fund (CHQ / CHQR)	CA, ACU, AS or AC	LOCAL CHEQUE CLEARING / STATUS OF CHEQUE DEPOSIT
2-2 Issued cheque status	Cheques	`get_issued_cheque_status`	AS400 Cheque Status enquiry	CA, ACU-CHQ, AS or AC	LOCAL CHEQUE CLEARING / STATUS OF CHEQUE ISSUED
2-3 Cheque book sent	Cheques	`get_last_cheque_book`	SOA CBS-ChqBookRange-I	CA, ACU-CHQ, AS or AC	CHEQUE BOOK / CHEQUE BOOK ENQUIRY
2-4 New cheque book	Cheques	`request_cheque_book`	SOA Cheque Book Request, Siebel SR	CA, ACU-CHQ or AS	CHEQUE BOOK / CHEQUE BOOK REQ (NORMAL, EXPRESS or SAME DAY)

Old option	Specialist	Tool	Back-end call	Verification	SR category / sub-category
2-5 Stop cheque payment	Cheques	`stop_cheque_payment`	AS400 Cheque Stop Payment, Siebel SR	CA, ACU-CHQ or AS	CHEQUE BOOK or LOCAL CHEQUE CLEARING / STOP PAYMENT INSTRUCTIONS
3-1 Velocity forms	Business Internet Banking	`send_velocity_form`	Fax service	None	REQUEST FOR FORM / VELOCITY APPLICATION or USER REQ FORM
3-2 Technical support	Business Internet Banking	Hand-over `velocity_desk`	Siebel A/C Verification, AACC	12-digit account number	VELOCITY / (none)
3-3, 3-4 Payment or Trade module training	Appointments	`book_training`	CMM booking, Siebel SR	Account check	VELOCITY / VELOCITY TRG REG – PYMT or TRADE (NEW)
4-1 New account and facilities	New Business	Hand-over `non_customer`	AACC Non-Cust skillset	None	Service manager selects
4-2 Trade enquiries	New Business	Transfer `trade_hotline`	6318 7777	None	(outside BBCSC)
4-3 Commercial property loan	New Business	Hand-over `cpl_desk`	AACC CPL skillset	None	LOANS AND FINANCING / CPL
4-4 Foreign worker account	Appointments	`book_branch_appointment`	CMM branches and slots, Siebel SR	Account check	ACCOUNT SERVICES / FOREIGN WORKER ACC OPENING (NEW)
4-5 Business insurance	New Business	Hand-over `insurance_desk`	AACC	None	Service manager selects
5-1 Rates	Info Desk	`get_prime_rate`, `get_sgd_td_rates`, `get_fx_rate`	AS400 Rates, SOA SGD TD	None	FOREIGN EXCHANGE / INDICATIVE FX RATES (<S$40K)
5-2 Promotions	Info Desk	`list_promotions`, `fax_promotion`	CMM promotion table, fax service	None	(none)
5-3 Forms by fax	Info Desk	`list_forms`, `fax_form`	CMM I_FAX, I_CONFIG, fax service	None	(none)
5-4 Branch location and hours	Info Desk	`find_branch`	CMM branch details	None	(none)
5-5 GIRO and SWIFT codes	Info Desk	Knowledge base `bank_codes`	CMM announcement	None	(none)

Old option	Specialist	Tool	Back-end call	Verification	SR category / sub-category
6 Lost card, unauthorised withdrawal, SMS alerts	Card Loss	Hand-over `card_ops`	Siebel Account Login, AACC high priority	12-digit account number	By segment, high priority
Service code 328	Front desk	`fd_loans` hand-over	CMM service-code mapping	AS+BC or AC+BC	FIXED DEPOSIT, LOAN or FX (see p. 29)
9 Feedback	Feedback	Task `ivr_survey`	CMM survey tables	None	(none)
0 Service manager	Any	Hand-over `service_manager`	AACC, CTI screen pop	Any	Set by the specialist in charge

Menus stay dynamic by access level, as on p. 3 and p. 10. After verification the task stores `access_level` (P, AS or AC), `user_type`, `has_ca`, `has_acu`, `has_acu_chq` and `bizconn`. Each tool's precondition reads those values. A caller who asks for something their access level does not allow hears why, for example "Statement requests need a phone code login", and is offered a service manager.

Proposal: telling the caller why an option is not available, and offering a service manager, is our design. The IVR simply left those options out of the menu (pp. 3, 10). The tool names are ours too.

MY lines

Line	Option	Specialist	Tool or hand-over	Verification
BB General, BB Islamic	Account balance, recent activity, statement (SA, CA, FCA)	Accounts	`get_balance`, `list_recent_activity`, `request_statement`	Key code + TPIN
BB General, BB Islamic	Transfer between own accounts; OCBC loan payment	Payments	`transfer_own_accounts`, `pay_ocbc_loan`	Key code + TPIN

CFS Mass and iQ, Al-Amin	Credit card services (6 options)	Cards	`card_balance_transfer`, `request_fee_waiver`, `change_credit_limit`, `get_card_summary`, `get_application_status`, `activate_card`	Phone code + TPIN
CFS Mass and iQ, Al-Amin	Banking enquiries (6 options)	Banking	Shared account and cheque tools, `find_branch`, rate tools	Phone code + TPIN (none for rates and branches)
CFS Mass and iQ, Al-Amin	Fund transfer and bill payment (5 options)	Payments	`transfer_own_accounts`, `pay_ocbc_loan`, `pay_credit_card`, `pay_utility_bill`, `interbank_giro`	Phone code + TPIN

Line	Option	Specialist	Tool or hand-over	Verification
CFS iQ member	Speak to the iQ service executive	Front desk	Task `verify_phone_code`, then hand-over `iq_executive`	Phone code or 12-digit IC

The MY pack notes "call flow subject to change as users have not finalised the same". These rows follow pp. 49–56 as they stand.

13. Service rules by specialist

Each specialist keeps the exact rules of its pages in the call flows. Every service ends with the same closing choices unless noted: repeat (`*`, 2029), more of the same kind of service (1, 1032 or 1055), main menu (8, 2015) and feedback (9, 2017).

Accounts

Account balance (pp. 4–5). Calls CBS-AcctDeptStaticBalance, for SGD and foreign currency accounts.

1. If the account is an omnibus account: "Please take note that the availability of balances for utilization is subject to the facility limits for omnibus and/or shared facilities" (1122).
2. Current balance: "Your account balance is…" (1020), or "…is in debit of…" (1021) when negative.
3. Available balance: "Your available balance is…" (1022), or "…is in debit of…" (1023).
4. When the two differ: both a hold and a pending cheque → "The difference is due to cheque pending clearance of… (1024) and hold amount of… (1025)"; a hold only → 1026; a pending cheque only → 1024. Earmark means hold. A negative hold or pending amount is read with the word "Negative" in front.
5. With an overdraft limit: "Your overdraft limit is…" (1028).

Incoming funds (p. 6). GIRO, local and overseas transfers credited in the last 7 calendar days, from CBS-IncomingFundTransaction, 9 records at a time, newest first.

- None: "There were no incoming funds received in the last 7 days" (1219).
- Otherwise: "You have {{n}} incoming fund transaction(s) in the last 7 days" (2020, 1240 or 1218).
- Today's records first, under "For today" (1057): "{{type}} of (2025) {{amount}} is (2062) debited (1124) / credited (1123)". Earlier days add "on (2026) {{date}}".
- More than 9: "For more incoming funds, press #" (1300). Earlier days after today's: "For previous days' incoming funds, press 1" (1301); "more account enquiries" is offered only when there are none.

Recent account activity (p. 7). CBS-CASAHistory-I, most recent first, at most 15 transactions, 9 per page.

- "Your last (1030) {{n}} transaction(s) was/were (1033/1034) {{amount}} {{type}} is (2062) debited (1124) / credited (1123) on (2026) {{posting date}}".
- The type is read from the 4-digit auxiliary transaction code mapped in CMM; if that is empty, from the 3-digit transaction code (I_TRAN).
- More than 9: "To proceed, press #" (2034).
- None: "There is no account activity since {{DDMMYYYY}}" (1031), or "There is no account activity" (1031a) when the file has no date.

Statement request (p. 8). No introductory message.

- "To request statement for (1035) {{current month}}, press 1; for (2019) {{previous month}}, press 2; for {{2 months ago}}, press 3; for statements earlier than (1220) {{previous month}}, press 4." Option 4 goes to a service manager (BI).
- Confirm: "You have requested for (1250) {{month}} statement (2077). To confirm, press 1 (2031); to cancel, press 2 (2032)." For the current month, the start and end dates are read as DD MMM.
- On confirm: Statement request (45) on SOA, an SR in Siebel, then "Your statement will be sent to you within 7 working days" (1037) and "To request another statement, press #" (1334). On cancel: "You have cancelled your request" (1036).

Change phone PIN (p. 9): see section 9.

Cheques

Deposited cheques (p. 11).

1. SOA 3090 on the account first: if another hold amount exists, "There is cheque pending clearance of…" (1207).
2. "Cheques deposited in the last 7 days, press 1 (1209); cheques returned in the last 7 days, press 2 (1208)." Incoming Fund is called with CHQ or CHQR.
3. None: 1211 (deposited) or 1230 (returned). Otherwise "You have {{n}} cheque(s) deposited (1246/1247) / returned (1229/1210) in the last 7 days".
4. Each: "Cheque (1212) {{number}}, for (2019) {{amount}}, {{status}}", with "due to (2065) {{reason}}" when returned, and "on (2026) {{date}}" for earlier days. The cheque number is left out when the host has none.
5. Today first (1057); "For more cheque details, press #" (1213) beyond 9; "For previous day cheque status enquiries, press 1" (1214).

Issued cheque status (p. 12). "Please enter the 6-digit cheque number" (1050); not 6 digits is invalid. AS400 Cheque Status enquiry, statuses mapped in CMM:

Status	Caller hears
Presented, stopped, cleared, unavailable	"Cheque number (1051) {{number}} [of (2025) {{amount}}] was {{status}} on {{date}}"
Returned	"Cheque number (1051) {{number}} for account number (1052) {{account}} was returned (1054) due to (2065) {{reason}}"
Not presented	"Cheque number {{number}} was not presented" (1336)
Not on record	"We are unable to confirm your cheque number" (1243)

Then "For more cheque issued status, press #" (1333).

Last cheque book sent (p. 13). CBS-ChqBookRange-I, one page (up to 43 records), latest first.

- Code 90: "No cheque book has been issued" (1061).
- Up to 40 books: "{{n}} cheque books have been issued on (1251) / cheque book has been issued on (1059) {{date}}, ending with cheque number (1060) {{number}}". More than 40: "More than forty" (1239) first.

New cheque book (p. 14).

Choice	Offered	Charge (CMM)	Sub-category
On the same day (1063)	Before 10 am	SGD $27, USD $18	SAME DAY DELIVERY
By the next day (1064)	Before 3 pm	SGD $18, USD $12 (express)	EXPRESS DELIVERY
Within five working days (1062)	Always	None	NORMAL

A choice past its cut-off is not read out. The charge is announced, then confirm (2031) or cancel (2032). Normal delivery reads "You have requested for a cheque book" (1065). On confirm: SOA Cheque Book Request, a Siebel SR, then "Your cheque book will be sent" (1068). Cancelling a paid option offers five working days instead (1062). Cut-offs live in CMM.

Stop cheque payment (pp. 15–16). Opens with "Please note that instructions placed after 7 PM on weekdays will not be effective for cheques presented for clearing today."

- "To stop payment for (1069) a single cheque (1070), press 1; a cheque range (1071), press 2."
- Single: "Please note that a $15 charge will apply", then proceed (2034) or cancel. Cheque number (1074), 6 digits. Range: $30 charge; first cheque (1077) and last cheque (1078), at most 50 cheques, within one cheque book.
- Confirm: "You wish to stop payment on cheque no (1075) {{number}} [to (2028) {{number}}] for (2019) {{currency}} for account no (1052) {{account}}": 1 confirm, 2 cancel, 3 change the cheque number (1076).
- AS400 Stop Payment and a Siebel SR. Success: "Your cheque has been stopped" (1082) or "Your cheques have been stopped" (1326), and "To stop another cheque payment, press #" (1335).
- Host code 192: already stopped (1264 single, 1205a range). 196: presented or cleared (1080 single, 1205 range). 343: "The cheque range you have entered is invalid. Please enter less than 50 cheques, with the cheque range within the same cheque book" (1081), back to the first cheque. Other codes: the host error table.

Only current accounts are offered for a stop payment, leaving out type W accounts ("minus W", p. 15). After a stop payment answer, pressing 1 for a cheque status enquiry goes straight to the issued cheque status flow (p. 16).

Business Internet Banking (p. 17)

Option	What happens
New application and password reset (1084)	Velocity forms sent by fax (see Forms by fax, below)
Problems using internet banking (1085)	Technical support: an identified caller goes straight to the Velocity agents; otherwise "Please enter your 12-digit account number" (1087), a Siebel account check, then the Velocity agents
Attend the Payment Module (1086)	Training booking, single branch
Attend the Trade Module (1195)	Training booking, single branch

New Business (p. 18)

New account and facilities (1090) go to the Non-Customer skillset; trade enquiries (1091) to the Trade hotline 6318 7777; commercial property loan (1089) to the CPL skillset; foreign worker account opening (1192) to a branch booking; business insurance (1088) to the insurance service manager.

Appointments (pp. 19, 45, 47, 48)

Every booking is made at least 2 days ahead and goes into CMM, then a Siebel SR (Appointment Book). A dormant account hears "Please visit your nearest OCBC branch" (1327).

Foreign worker accounts, several branches (pp. 19, 48).

1. An existing booking for the account: "You have made an appointment for (1320) {{n}} accounts (1100) / account (1303)": 1 cancel, 2 new appointment (1097), 8 main menu.
2. One branch only: straight to the single-branch flow. Several: "Please say the branch name or the region of the branch… for example Bukit Timah Branch or North Region" (1098). The ITSR version (p. 48) lists only branches with free dates (1313).
3. Speech fails: "Sorry, we could not understand you" (2091), then the branches by region with keys, # back.
4. "You have chosen (2069) {{branch}}": 1 confirm, 2 another branch (2070).
5. "Please enter the number of accounts to be opened. You are entitled to a maximum of (1099) {{max minus booked}} accounts per appointment" (1266). The maximum is 6 per account holder, set per branch; more than the free slots hears "You have entered an invalid number of attendees".
6. "The earliest appointment available for this branch is on (1101) {{date}} from (2027) {{start}} to (2028) {{end}} for {{n}} accounts": 1 this slot (2085), 2 another date (2084, said or keyed: ddmmyyyy in English, yyyymmdd in Mandarin; 1102), 3 another branch.
7. Booked: "You have made an appointment at (1092) {{branch}} on (2026) {{date}} from… to… for {{n}} accounts", the items to bring (1333), 1 to cancel (1094), and 2 to book the remaining (1282) {{n}} accounts when slots remain.

Option 2, booking the remaining accounts, is offered only when 5 or 6 were asked for (p. 19), or, in the ITSR version, only while slots remain (p. 48). Asking for more accounts than the free slots hears "You have entered an invalid number of attendees" and is asked again.

Payment and Trade Module training, one branch (p. 45). OCBC Centre only. Payment Module: every Wednesday, 9:30 am to 12:30 pm. Trade Module: the last Friday of each month, 10 am to 12 noon. Each holds 12 people, and each account may book at most 2 attendees (1269). No bookings on Saturdays, Sundays or public holidays. "The earliest appointment available for OCBC Centre is on (1291)…": 1 this slot, 2 the next one (1104).

If the CIF already has a training booking, the caller hears "You have made an appointment for (1320) {{n}} attendees": 1 to cancel, 2 for a new appointment (only while places remain), 8 for the main menu (p. 45).

Cancelling a booking (p. 47). Lists each booking: "To cancel your appointment at (1310) {{branch}} on {{date}} from… for {{n}} attendees / accounts, press n", with 7 for the previous menu (1309). Cancellation closes 2 days before the appointment: "No

cancellation is allowed 2 days before your appointment date" (1297). Success: "Your appointment has been cancelled" (1095), then 1 new appointment, 2 cancel another (1311, only while others remain). Two calls for the same slot count as two appointments. Limits: 6 bookings per account for foreign worker accounts, 2 for training.

When a booking cannot be cancelled (p. 47): if the account has used all its places and every booking falls within the next two days, the caller hears 1297 with 0 for a service manager; otherwise 1297 without it. Both then offer 7 to go back to the existing-booking menu.

Info Desk

Rates (pp. 22–26). A rates-indicative message from CMM plays first, then prime rates (1114), Singapore time deposit rates (1115) or foreign exchange rates (1116).

Rate	Back end	Read as
Prime	AS400 Prime Rates	"The prevailing prime lending rate for the OCBC Bank group is (1117) {{rate}}"
SGD time deposit	SOA SGD TD	"Time deposit rates… for deposits from 5,000 to 20,000 dollars only; special rates above 50,000, please speak to our service manager" (1241). "Minimum deposit (1133) {{n}} dollars. For (2019) {{m}} to (2028) {{n}} months (2072), {{rate}} percent (2073)". Equal rates for neighbouring months are joined ("for 1 to 2 months, 5%").
Foreign exchange	AS400 FX Rates	"Foreign exchange rates against Singapore dollar (1134). Please tell me the currency…" (1236). US, Canadian, Australian, New Zealand and Hong Kong dollars, sterling, euro, yen, Indonesian rupiah. "Selling (1138), buying (1139); selling TT or OD (1140); buying TT (1141); buying OD (1142)". Currency names and units from I_CURRENCY.

Code 33 or no answer: 1119, then other rates (1120 or 1118, 1137), 8, 9, 0.

Promotions (p. 21). None: 1107. Otherwise up to 7 promotions grouped by category in CMM; the chosen one plays its message. If it has a fax: 1 to request it (1108), 2 other promotions (1109). Without a fax: 1 other promotions, 0 for a service manager.

Forms by fax (pp. 27–28). "You may request for the following to be sent to you" (1143):

Group	Forms
Account related (1149)	Interbank GIRO application (2651), Interbank GIRO termination (2652), cheque book request (2656), business account update (2655), business card application (2657), business card maintenance (2659)
Electronic banking services (1145)	Phone banking or eAlerts application (2654), phone banking maintenance (2653), eAlerts maintenance (2658), phone banking instruction guide (2661)
Internet banking (1009)	Internet banking application (2662), internet banking maintenance (2660)

If overseas fax is enabled: local (1151) or overseas (1152). Local: "Please enter your local fax number" (1154), 8 digits. Overseas: country code, area code and number, then # (1153), at least the minimum digits in I_CONFIG. Confirm: "You requested (1155) {{form}} to be sent to number (1156) {{fax}}": 1 confirm, 2 another number (1157), 3 cancel. If the fax number is the caller's own number: 1160, 1161, and the call ends so the fax can arrive. Otherwise "The form you have requested will be faxed to you shortly" (1158), 1 for another fax (1159).

Branch location and hours (p. 44). "Please say the branch name or the region…" (1267). One match: confirm (2069). Several: up to 8 by key, 9 for more (1302). Speech fails: 2091, regions North (1321), South (1322), East (1323), West (1324), Central (1325), then that region's branches. "{{branch}}, operating hours are (1233) {{hours}}, located at (1234) {{address}}", always in English.

GIRO and SWIFT codes (p. 20, option 5, 1193): an announcement from CMM.

When the caller asks for a person here (pp. 20–28): the account number is collected and the customer read from Siebel, then the BI skillset; with no account number, the Non-Customer skillset. The SR fields are left empty.

Card Loss (p. 30)

In office hours: "Please enter your 12-digit account number" (1087), Siebel Account Login, then the BI queue at high priority (medium priority if the login fails). Outside office hours the call goes to Card Operations (MY Auth, Singapore TC1).

Malaysia hotlines in detail (MY pack pp. 49–56)

The MY pack is marked "Call flow subject to change as users have not finalised the same". These are its contents as they stand. Every MY line's profile says "Segment = unknown": the caller's segment is not known when the call starts. Page 49 is an earlier, lower-resolution version of the CFS flow on page 50; where they differ, page 50 is used.

BB MY General, 1300-88-7000 (pp. 51–54). Greeting "Welcome to OCBC"; language 1 English, 2 Mandarin, 3 Bahasa. Menu: 1 log in with your PIN; 2 branch locations, rates and forms; 0 at any time for a customer service officer.

Path	Steps and options
Log in	"Please key in your key code" (then, after 3 seconds, "At any time to speak to our customer service executives, press 0"), then "Please key in your TPIN"
1 Account enquiries	1 bank balance, 2 recent account activities, 3 account statement request; then the account type (1 savings, 2 current, 3 foreign currency) and the account from a list ("For your SA / CA number {{x}}, press n", 5 a page, more on the next key); for foreign currency accounts the caller can key the number or press 1 for the list
2 Transfers and loan payment	1 transfer between own accounts (from savings 1, from current 2); 2 pay an OCBC loan. No loan: "Sorry, you do not have any loan account with OCBC Bank". One or more: "Please note that instructions placed after 8 pm will be effective for tomorrow (only between 8.01 pm and 12.00 am)", then the loan from a list (5 a page, 6 for more) and the paying account (savings 1, current 2)
3 Cheques	1 cheque status, 2 stop payment, 3 cheque book request
4 FPX direct debit	FPX direct debit services
5 PIN change	"Please enter your new 6-digit telephone PIN and press the hash key"
6 Another phone code	1 log off this phone code and enter a new phone code and TPIN; 2 back to the main menu

Path	Steps and options
Rates and forms	1 branch locations; 2 forms (1 Velocity maintenance, 2 Velocity application, 3 phone banking application); 3 foreign exchange rates (1 USD, 2 euro, …); 4 deposit rates (1 month, 2 months, …); 5 foreign currency deposit rates (1 call rates, 2 fixed deposit rates); 6 Islamic banking (1 Current Account-i, 2 General Investment Account-i); 7 prime rate
0 Customer service officer	1 banking transactions, 2 Velocity and report of card loss, 3 trade, 4 SME hotline; options 1 and 2 ask for the account number first

BB Islamic, 1300 88 0255 (p. 55). "Welcome to OCBC Al-Amin"; language 1 Bahasa, 2 English, 3 Mandarin; then the same flow as BB MY General.

BB MY Premier, 1300-88-7200 (p. 56). "Welcome to OCBC Business Banking Premier Service"; language 1 English, 2 Mandarin, 3 Malay; then transfer to an agent.

CFS MY Mass and iQ, 1 300 88 5000, and CFS Al-Amin, 1 300 88 0310 (pp. 49–50; ITSR 3535665). Greeting "Welcome to OCBC Bank"; language 1 English, 2 Mandarin, 3 Malay. Then 1 to continue with self-service, 2 for iQ members.

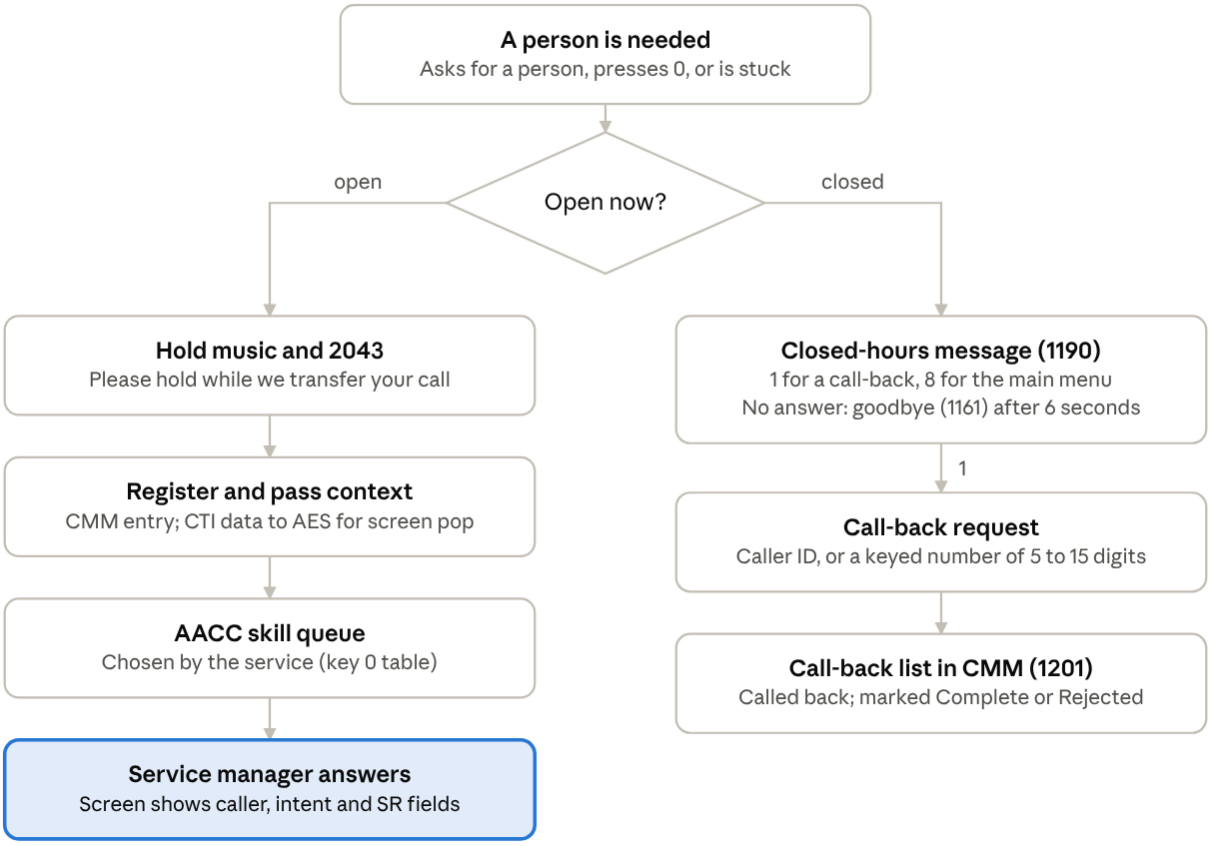

Path	Options
iQ member	1 for the self-service menu, or 2 to speak with an iQ service executive: "To serve you better, please enter your phone code or 12-digit IC number, or please wait while we arrange for an iQ service executive to speak with you", then "Please enter your telephone PIN, or press 0 to speak with our customer service executive", then "Please hold while we connect you to our customer service executive"
1 Credit card services	p. 50: 1 balance transfer, 2 fee waiver, 3 credit limit change, 4 card balance, statement and transactions, 5 application status, 6 card activation (p. 49 shows an earlier five-option version: waiver request, credit limit adjustment, balances and statement request, card application, activation)

Path	Options
2 Banking enquiries	1 account balance, 2 cheque services, 3 statement request, 4 rates, 5 branch locations, 6 change telephone PIN
3 Fund transfer and bill payment	1 transfer to own accounts, 2 payment to OCBC loan or financing, 3 payment to credit card (iQ card or PowerCredit on p. 49), 4 utility bills, 5 interbank GIRO
0 Customer service officer	1 report a lost card, 2 banking account services, 3 credit card services (iQ card or PowerCredit), 4 housing loan or financing, 5 other services; then verification and "Please hold while we connect you to our customer service executive"

14. Hand-over, office hours and call-back

A service manager is offered only while the Commercial Service Centre is open: **8:30 am to 6:00 pm, Monday to Friday, Singapore time**. This is one schedule, `bbcsc_hours`, with public holidays listed as closed days. Every transfer to a person checks it.

Open hours reach a person with context; closed hours offer a call-back

Hand-over workflow · office hours, queue transfer, call-back

VIP and Investigations callers first go to the service manager they last spoke with (see below).

Hand-over to a service manager (p. 41)

Moment	Open	Closed
Caller asks for a person, presses 0, or a specialist cannot finish	Hold music, then "Please hold while we transfer your call to a Service Manager" (2043). The call moves to the AACC skill queue.	"Thank you for calling OCBC Bank. Our Commercial Service Centre is operational from 8:30 am to 6:00 pm, Monday to Friday" (1190), then: 1 for a call-back, 8 for the main menu.
Main menu	Offers "press 0 to speak with a Service Manager" (2016)	Does not offer 0

Moment	Open	Closed
Language menu	0, 8 and 9 are never offered (p. 1)	Same

The hand-over is a Weave **transfer** of type `http_request` to the AACC bridge, so the call lands in the right skillset rather than on a single number. Before it moves, the transfer's `before` actions register the call in CMM. Its headers carry the screen-pop data for the agent desktop (AES integration):

Header sent to AACC	Filled from
`X-CIF`, `X-Account`	The verification task
`X-Verified`, `X-Access-Level`	The verification task
`X-Language`	The language in use
`X-Intent`	The specialist in charge, for example `balance`
`X-SR-Type`, `X-SR-Category`, `X-SR-Subcategory`	The specialist's SR fields (see section 12)
`X-Skillset`, `X-Priority`	The queue the specialist chose: BI single skillset, BI by segment, BC FD, BC Loans, Velocity, CPL, Non-Cust; High priority for card loss

Proposal: the header names and the bridge into AACC are our design. The call flows only say that CTI data goes to the agent's screen pop through the AES integration, and that the fields are defined in the AACC and Email FSD (p. 41).

Where key 0 goes, service by service

Each page of the SG pack says which queue a service manager request goes to. The hand-over uses that queue for the specialist and service in charge.

Service (pages)	Key 0 goes to	SR on transfer
Balance, incoming funds (4–6)	BI single skillset (the old incoming-funds skillset)	As in section 12

Service (pages)	Key 0 goes to	SR on transfer
Recent activity, statements 1–3, PIN change, all cheque services (7–16)	BI by customer segment	As mapped
Earlier statements, option 4 (8)	BI by customer segment	ACCOUNT SERVICES / COPY OF STATEMENT - EXTG
Velocity forms, technical support, training (17)	BI Velocity skillset	As mapped
New account and facilities (18)	BI Non-Customer skillset	QUICKKILL, category selected by the service manager
Trade (18)	Trade hotline 6318 7777	None
Commercial property loan (18)	BI CPL skillset	LOANS AND FINANCING / CPL
Foreign worker booking (18)	BI by customer segment	ACCOUNT SERVICES / FOREIGN WORKER ACC OPENING (NEW)
Rates, promotions, forms, branches, GIRO and SWIFT (20–28)	BI skillset after the account number is taken and the customer read from Siebel; Non-Customer skillset when the caller has no account number	Empty
FX rates (25)	BI skillset by customer segment	FOREIGN EXCHANGE / INDICATIVE FX RATES (<S$40K)
Service code 328 (29)	BC FD, BC Loans or BI skillset, per option	See section 8
Appointments (19, 45, 48)	As the menu they were reached from	As that menu
Card loss (30)	BI, high priority (medium priority if the Siebel login fails)	None given

Service (pages)	Key 0 goes to	SR on transfer
Phone code login, timeouts, wrong input, host errors, IVR survey (33, 35–37, 40)	The BI or BC skillset of the service the caller chose (for example balance goes to the single skillset)	As that service
Account + NRIC + OTP login (34, 46)	BI general queue	As that service
VIP line (31)	The last service manager, else their SM group	Empty
Investigations line (32)	The last service manager, else the BI Investigate skill	Empty

A call transferred back from the service manager to the IVR starts as a new call. It goes to the main menu if the caller had chosen a language, otherwise to the language menu, and the caller must verify again (p. 41, note 3).

The pack places the time-of-day check on the PBX, which sends calls outside office hours to voice mail (p. 41). The SG pack also asks for an accessibility matrix, invalid and no-input handling, and exception call flows on every slide (p. 2); this document covers them in section 10 and section 15.

Fixed transfers to other numbers

Transfer	Target	Hours
Trade hotline	6318 7777	Its own hours
Card Ops after hours	Singapore TC1, MY Auth (p. 30)	Used only when `bbcsc_hours` is closed
MY Premier desk	Premier agent queue	MY business hours
Service manager survey	The SG Service Manager Survey agent's internal number	Any time

VIP and Investigations lines (pp. 31, 32)

Both lines route to **the service manager the caller last spoke with**.

1. Greeting in the caller's favourite language, taken from the VIP table in CMM by caller ID.
2. Outside office hours: message 1190, then 1 for a call-back or end the call.

3. VIP line only: the caller ID is looked up in the VIP table. No match goes to the main English menu on 6538 1111. A match is checked by VIP type: *Account* asks for the 12-digit account number (1087) and checks it in Siebel; *Phone code* runs `verify_phone_code`; *Default* goes straight on.
4. Investigations line: language selection once (no retry), then the 12-digit account number and a Siebel Account Login. An error transfers to BI.
5. The last service manager and their group come from CMM (VIP) or Siebel (Investigations). If they are free, the call goes to them.
6. If not: "The previous Service Manager you spoke with is unavailable" (1169), then 1 for another service manager (the SM group, or the Investigate skill) or 2 for a call-back.

Call-back (p. 39)

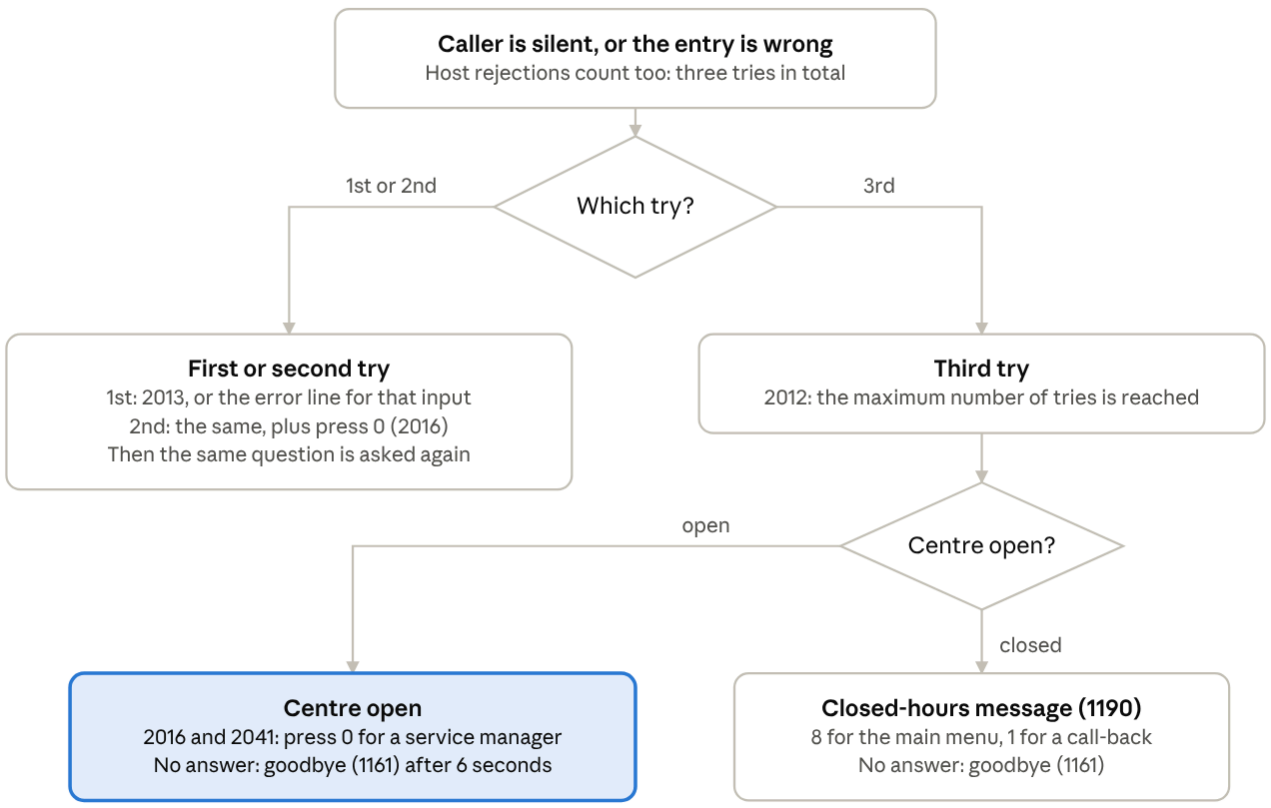

The `request_callback` tool runs only when call-back is enabled in CMM.

- If the caller ID already has an open call-back request: "You have already made a request for us to return your call to…" (1197), then 1201, and the call ends.
- Otherwise: 1 to be called back on the caller ID (1196), or 2 to key another number (1200). That number must be 5 to 15 digits, with 3 tries.
- The request is written to CMM's call-back list: "Our Service Manager will return your call as soon as possible. Goodbye" (1201).
- Supervisors see the list in an online report. Agents mark each request Complete or Rejected after calling back. The SR is created from the agent's CTI data when the call-back is made.

The pack also notes "Same Day request not will not be accepted" (p. 39). The wording is unclear; see section 21.

15. Error handling: mistakes, silence and system errors

Every input allows **three tries in total**, counting the caller's mistakes and the host's rejections together (pp. 33–36). The third failure ends the self-service path: a service manager if the centre is open, otherwise the closed message and a call-back.

Error-handling workflow · the three-tries rule

Silence (p. 35)

Silence is the agent's **inactivity** setting: 5 seconds before the menu is read (p. 2), and a nudge after each further silence.

Silence	Agent says	Then
1st	"We have not received a response from you" (2013)	Asks the same question again
2nd	2013, plus "To speak with a Service Manager, press 0" (2016)	Asks again
3rd, open	"Sorry, you have exceeded the maximum number of tries allowed" (2012), "To speak with a Service Manager, press 0", "or your call will be terminated shortly" (2041)	After 6 seconds: "Thank you for calling OCBC PhoneDirect. Goodbye" (1161), and the call ends

Silence	Agent says	Then
3rd, closed	2012, then 1190 (hours), "To return to Main Menu, press 8"	8 returns to the main menu, 1 asks for a call-back; no answer plays 1161 and ends the call

Wrong input (p. 36)

A wrong entry plays the matching error line, then follows the same three steps as silence. In Weave these lines are fixed lines, so they read the same in every call:

Error line	Number
You have entered an invalid option	2044
You have entered an invalid account number	2045
You have entered an invalid Phone PIN	2046
You have entered an invalid cheque number	2047
You have entered an invalid number of attendees	2048
You have entered an invalid date	2049
You have entered an invalid fax number	2050
You have entered an invalid service code	2051
You have entered an invalid One-Time Password	2052
You have entered an invalid NRIC or passport number	2053
You have entered an invalid new Phone PIN	2054
You have entered an invalid call-back number	2055
You have entered an invalid number	2056
You have entered an invalid phone code	2074

In a spoken conversation the model also hears what went wrong, so it can rephrase naturally ("That was six digits; the phone code has seven") instead of repeating a menu.

Proposal: letting the model rephrase an error in its own words, alongside the fixed error line, is our design.

Host errors (p. 40)

Each back-end tool has an error handler. The host's response code is looked up in CMM's exception table:

- **Code found:** the agent says the mapped host error phrase, then "To speak with a Service Manager, press 0; to return to the main menu, press 8" (three tries).
- **Code not found, timeout or no answer:** "Sorry, we are unable to process your request" (1189), then the same two choices.
- **Rates unavailable** (code 33 on pp. 23–26): "Sorry, rates for this option are currently unavailable" (1119), then 1 for other rates, 8, 9 or 0.
- **Cheque stop payment** (p. 16): 192 "already stopped" (1264, 1205a); 196 "presented or cleared" (1080, 1205); 343 "invalid range" (1081), which goes back to the first-cheque question.

Limits on the whole call

Limit	Setting	Why
Longest call	20 minutes	Ends abandoned or looping calls
Longest silence	60 seconds	Hard stop under the nudges
Moves between specialists	12	Stops a call bouncing between specialists
Caller asks for a person twice, or sounds frustrated	Hand-over to a service manager	Escalation rule

Proposal: these limits, the escalation rule and the off-topic rule are our suggested starting values; the call flows do not define them. The agent stays on banking topics: an off-topic request gets one polite redirect, and a second leads to the main menu.

16. Languages and fixed lines

Singapore agents speak **English and Mandarin**, and Malaysian agents speak **English, Mandarin and Malay**. The caller can simply start speaking in their language. The keypad choice is still offered for callers who prefer it.

Choosing the language

Line	Order offered	Default
SG 6538 1111, 6586 5292	1 English, 2 Mandarin	English after 3 failed tries (p. 1)
SG 6538 2222 (VIP)	Not asked: the VIP table holds each caller's language	English
MY BB General, Premier, CFS Mass and iQ, CFS Al-Amin	1 English, 2 Mandarin, 3 Malay	English
MY BB Islamic	1 Bahasa, 2 English, 3 Mandarin	Bahasa

Personalised language (p. 1): after a caller ID picks the same language 5 times, CMM stores it as the preferred language. The `call_started` hook reads it, and the agent greets in that language without asking. CMM function "11. Manage Customer Favorite Choice" resets the counter. The same rule drives the **favourite transaction** on p. 2: after 5 balance enquiries, the front desk opens with "Your favourite transaction is Account Balance. To do the same, say 'Balance' or press 1" (1242), with a 3-second wait.

Fixed lines

Every numbered prompt in the call flows becomes a **fixed line** in the agent's catalogue, keeping its number as the line's id (for example `m1001_good_morning`). Each fixed line holds its text in every language the agent speaks. Fixed lines are used wherever the wording is regulated or must not vary:

- Greetings by time: 1001 (00:00–11:59), 1002 (12:00–17:59), 1003 (18:00–23:59), and 1004, "We have recently upgraded our phone system".
- Legal and fee notices: 1122 (omnibus facility limits), 1275 (terms and conditions on first OTP use), stop payment charges ($15 single, $30 range), the 7 pm cut-off notice, cheque book charges.
- Errors and hours: 1189, 1190, 2012, 2013, 2041, 2043, 1161, and the error lines 2044–2074.
- Results read with values: for example "Your account balance is (1020) {{amount}}" and "Your Statement will be sent to you within 7 working days" (1037).

The free conversation in between ("Which account?", "Anything else?") is written by the model in the caller's language, within the persona's rules.

How numbers and dates are read

Value	Read as	Weave setting
SGD amounts	"12,480 dollars and 35 cents"; cents only or dollars only when the other part is zero	Currency rule: major unit dollar, minor unit cent
Foreign currency (FCY)	"[dollar] point [cents]"	Currency rule per currency, from CMM's I_CURRENCY table
Negative balance	"in debit of…" (1021, 1023)	Tool result decides the line
Negative hold or pending cheque amount	The word "Negative" before the amount	Same
Rates	"X point Y percent", "zero point Y percent"	Number rule
Account and cheque numbers	Digit by digit	Digits rule, groups of 4
Dates	"12th December 2026"; statement periods as DD MMM	Date rule, ordinal month name
Times	"9 30 a m to 10 30 a m"	Time rule, spoken 12-hour
"Last 7 days"	7 calendar days	Tool query range

Branch names, hours and addresses are read in English on both the English and Mandarin calls (p. 44). Appointment dates are keyed as ddmmyyyy in English and yyyymmdd in Mandarin (p. 19).

17. After the call

Every call leaves four records: a **service request** in Siebel, a **summary and analysis**, a **redacted transcript and recording**, and, when the caller agreed, **survey ratings**.

Service request

Each specialist sets three call variables as it takes over: `sr_type`, `sr_category` and `sr_subcategory`, the values in the mapping tables above. Self-service requests (statement, cheque book, stop payment, appointment) create their own SR in Siebel as part of the tool. When the call ends, the `call_ended` hook writes the SR for every other

call, together with the summary and the outcome. A call handed to a service manager carries the same three values in its screen-pop headers, so the manager opens the SR already filled in.

Summary and analysis

Field	Values
Summary	Three sentences: what the caller wanted, what was done, what is pending
`intent`	balance, incoming_funds, activity, statement, pin_change, cheque_status, cheque_book, stop_payment, velocity, new_business, rates, promotions, forms, branch, card_loss, appointment, other
`resolved_in_self_service`	yes or no
`verified`	yes, no or not needed
`handed_over_to`	none, service_manager, trade_hotline, card_ops, vip_sm
`caller_sentiment`	positive, neutral or negative

These feed the studio's Calls, Monitoring and Questions pages, so the bank can see which requests still go to people.

Proposal: the summary and these analysis fields are our suggestion. The call flows define only the SR type, category and sub-category.

Recording and privacy

- Audio and transcript are kept for the bank's retention period, which the bank sets.
- PINs, phone codes and one-time passwords are entered on the keypad into **sensitive** variables. They never reach the model, the transcript or the logs.
- Redaction removes card numbers, account numbers, NRIC and passport numbers, phone numbers, one-time passwords and PINs from transcripts, logs and anything sent onward.

Proposal: the redaction list is our suggestion, based on what the call flows collect. The call flows say only that the phone PIN is sent to the host encrypted (p. 33).

Surveys

The two surveys are the same three-question form, each answered 1 Excellent, 2 Satisfactory, 3 Poor, with three tries per question (pp. 37, 38).

	IVR survey	Service manager survey
Reached by	The caller saying "feedback" or pressing 9, a service manager transferring the caller to it (p. 37), or the agent offering it at the end	The service manager transferring the call with the CTI control
Runs on	The Feedback specialist, SG Business Banking	The SG Service Manager Survey agent
Question 1	How would you rate the ease of use of our phone system?	How would you rate the officer's greeting and overall manner?
Question 2	How well do our phone features help you complete your transaction?	How well was the officer able to answer your query?
Question 3	Please rate your overall experience with PhoneDirect	Please rate your overall experience with your Service Manager
Profiles	One	Two: BI and BC

The questions live in CMM, so they can change without a new agent version. If CMM has no enabled question, or a sound file is missing, the caller hears "Sorry, this option is currently unavailable" (1254) and 1161. The survey opens with 4023 and "There are (4024) {{n}} questions" (2088), and ends with "Your feedback is highly appreciated… Goodbye" (4025).

Proposal: offering the IVR survey at the end of every call is our suggestion. The call flows offer it only on option 9 (see section 21).

18. Implementation in Weave Agent Studio

Each of the six agents is built the same way, in the workspace **OCBC Business Banking**: create the agent, then work down its pages. The steps below are for SG Business Banking, the largest. The others reuse its connections, fixed lines and verification tasks through Import a file, then drop what they don't need.

Order	Page	What to set	For SG Business Banking
1	Agent	Name, what it should do, what it says first, tone, language, voice, AI models	"SG Business Banking"; English and Mandarin; greeting chosen by time (1001–1003)
2	Agent › Fixed lines	Every numbered prompt, in each language	About 180 lines from the two packs
3	Settings	Office hours, call variables, constants	Schedule `bbcsc_hours`; variables listed below; constants such as the trade hotline 6318 7777
4	Knowledge	Material the agent answers from	GIRO and SWIFT codes, forms list, product FAQs
5	Tools	Connections to the bank's systems, the tools, their preconditions and results	Connections `as400`, `soa`, `siebel`, `cmm`, `aacc`, `fax`; about 40 tools
6	Workflow	The specialists, what each is told, which tools it has, when it hands over	Front desk and 8 specialists; handoffs from the front desk to each
7	Workflow › Verification	The verification tasks and their steps	`verify_phone_code`, `verify_account_otp`, `choose_account`, `change_phone_pin`
8	Channels	Phone numbers, keypad, greeting per number	One phone channel, number 6538 1111, keypad on
9	Guardrails	Topics, hand-over moments, limits	Banking topics only; hand over on request or frustration; limits from section 15
10	After the call	Summary, analysis fields, recording, redaction, survey	As in section 17
11	Tests	The scenarios in section 19	32 scenarios
12	Releases	Publish a version, deploy to Development, then Staging, then Production	v1.0.0

Proposal: this whole section is our build plan. The workspace name, the counts (about 180 fixed lines, about 40 tools) and the names of tools, variables and fixed lines are our design and estimates; the bank's naming standards can replace them.

What each specialist is told

Specialists are instructed in plain language on the Workflow page. Two examples:

> **Front desk.** You answer business banking customers of OCBC Singapore. Find out what the caller needs in one question, then hand over to the specialist for it. Never ask for a phone code, PIN or account number yourself. If the caller says a three-digit service code, use the service code tool. If they ask for a person, hand over to a service manager. Speak in the caller's language.

> **Accounts.** You give account balances, incoming funds, recent activity and statements. Every account tool needs a verified caller: when a tool says the caller is not verified, say "I need to verify your identity first" and start the verification. If the caller has more than one account, ask which one, by the last four digits. Read amounts exactly as the tool returns them. Never guess a figure. Offer "anything else on your accounts?" after each answer.

The rules shared by every specialist go in **Personality and rules**: never read out a full account number, never repeat a PIN, never give advice on investments, and offer a service manager whenever the caller is unsure.

Call variables

Variable	Type	Filled by
`caller_number`	Text	The caller ID, on call start
`language`, `favourite_txn`, `is_vip`	Text, text, yes/no	CMM lookup on call start
`phone_code`, `pin`, `otp`	Text, **sensitive**	Keypad steps of the verification tasks
`verified`	Yes/no	The verification tasks
`cif`, `access_level`, `user_type`	Text	AS400 Get CIF
`accounts`, `selected_account`	List, text	Get CIF, `choose_account`

Variable	Type	Filled by
`has_ca`, `has_acu`, `has_acu_chq`, `bizconn`	Yes/no	Account profile
`pin_changed_this_call`	Yes/no	`change_phone_pin` (blocks a second change, p. 9)
`tries`	Number	Every failed input; three in total
`intent`, `sr_type`, `sr_category`, `sr_subcategory`	Text	The specialist in charge

How "verify first" is built

The rule lives in two places, so the model cannot talk its way past it.

1. **The tool refuses.** Each account tool has a precondition. Example, `get_balance`:

```
"preconditions": [{
  "require": { "state": "verified", "equals": true },
  "on_fail": { "tool_error": "The caller is not verified yet. Say you need to
verify their identity first, then start verify_phone_code." }
}]
```

2. **The task decides, in code.** The verification task checks each answer with the bank's own system:

```
{
  "id": "verify_phone_code",
  "kind": "verification",
  "skip_if": { "state": "verified", "equals": true },
  "max_attempts": 3,
  "attempts_scope": "task",
  "return_history": "result_only",
  "steps": [
    { "id": "phone_code", "type": "collect", "input": "dtmf",
      "ask": "Ask for the seven-digit phone code, or the twelve-digit account
number, then hash.",
      "dtmf": { "terminator": "#", "timeout_s": 10 }, "store_in":
"phone_code",
      "validate": { "type": "regex", "pattern": "^(\\d{7}|\\d{12})$" } },
    { "id": "pin", "type": "collect", "input": "dtmf",
      "ask": "Ask for the six-digit phone PIN, then hash.",
      "dtmf": { "num_digits": 6, "terminator": "#" }, "store_in": "pin",
      "skip_if": { "state": "login_path", "equals": "account" },
      "validate": { "type": "tool", "tool": "as400_user_login" },
```

```
      "pass_when": { "result": "$.code", "equals": "00" } }
  ],
  "on_success": { "set_state": { "verified": true }, "resume": "caller",
"silent": true },
  "on_failure": { "outcome": "failed", "do": [{ "type": "handoff", "to":
"front_desk" }] }
}
```

A 12-digit entry sets `login_path = account` and chains to `verify_account_otp` (NRIC, then the SMS one-time password). Both paths end in the same `verified = true`.

19. Testing and acceptance

SG Business Banking ships with **32 scenarios** on its Tests page, and each other agent with its own smaller set. Every scenario uses mocked back-end answers, so no real account is touched. Keypad entries are typed as keys (`1234567#`), and the clock is set per scenario to test office hours.

Group	Scenarios	What they must prove
Verification	8	Phone code + PIN passes; 12-digit account + NRIC + OTP passes; host codes 50, 53, 62 and 83 each lead to the right line; three wrong tries in total lock out; a personal (non-corporate) caller hears 1221 and the call ends; a dormant account hears 1327; a second verification in the same call is skipped
"Verify first"	4	Asking for a balance, incoming funds, cheque status or a stop payment before verifying calls no account API at all (`http_not_called`), and the agent says it needs to verify first
Accounts	5	Balance with hold and pending cheque; negative balance read "in debit"; incoming funds over 9 records pages with #; statement for the current month; earlier statements go to a service manager
Cheques	5	Issued cheque returned with a reason; cheque book same day after 10 am is not offered; stop payment single ($15) and range ($30); range of 51 cheques refused; error 196 read correctly

Group	Scenarios	What they must prove
Info Desk	4	FX rate for a spoken currency; SGD TD rates collapse equal months; fax to the caller's own number ends the call (1160); branch found by region when speech fails
Hours and hand-over	3	Weekday 10 am: transfer with the right skillset and SR headers; Saturday: message 1190 and call-back; card loss after hours goes to Card Ops
Silence and errors	2	Three silences end the call with 2012 and 1161; an unknown host code plays 1189
Language	1	A caller who speaks Mandarin is answered in Mandarin, with amounts read correctly

Every scenario is run on each release. A release moves from Staging to Production only when all 32 pass and a live test call has been made on the Staging number in both languages.

Proposal: the scenario list and the release rule are our suggestion. The call flows do not define acceptance tests.

20. Integration with the bank's systems

Weave calls the same systems the IVR calls today, through six connections. Each is reached over HTTPS from the bank's API gateway, with its credentials held in the secrets vault and never in the agent.

Connection	System	Used for
`as400`	AS400 host	User Login, Get CIF, Phone PIN change, cheque status, stop payment, prime and FX rates
`soa`	SOA services (CBS)	Balances, incoming funds, account history, cheque deposits, cheque book range and request, statements, SGD TD rates, OTP send and verify
`siebel`	Siebel CRM	Account and NRIC login, account verification, SR creation, last service manager (Investigations)
`cmm`	CMM	Caller preferences, VIP table, office hours, promotions, forms, branches, appointment slots, call-back list, survey questions, host error phrases, service codes

Connection	System	Used for
`aacc`	AACC / AES	Transfers into skill queues with screen-pop data
`fax`	Fax server	Forms and promotions by fax

Proposal: the connection names and the API-gateway route are ours. The systems and the calls made to each are taken from the call flows.

21. Open questions

These questions are ours, raised while mapping the call flows. Each needs a decision from the bank.

- [ ] Should Weave keep offering the full keypad menu after 5 seconds of silence, or only on request? The IVR reads it after 5 seconds (p. 2).
- [ ] Is speech allowed for phone codes and one-time passwords? The pack says "key in or say" for the OTP (p. 34). This design takes all secrets on the keypad only.
- [ ] Which retention period applies to call recordings and transcripts?
- [ ] Do the MY flows (pp. 49–56) follow the SG verification rules, or the MY key code + TPIN rules only? The MY pack is marked "subject to change".
- [ ] Should the survey be offered at the end of every call, or only on 9 as today?
- [ ] Who owns the fixed-line translations into Mandarin and Malay, and who signs them off?
- [ ] Statement requests: are AC logins allowed (access box, p. 3) or only P and AS (menu line 1016)?
- [ ] MY credit card menu: the five-option version (MY pack p. 49) or the six-option version (p. 50)?
- [ ] Call-back: what does "Same Day request not will not be accepted" mean (p. 39)? A second request on the same day, or any request for a same-day call-back?

Appendix A. Glossary

Term	Meaning
AACC	Avaya Aura Contact Center: routes calls to service managers by skillset
AES	Avaya Application Enablement Services: carries CTI data to the agent desktop

Term	Meaning
ACU, ACU-CHQ	Foreign currency account; ACU-CHQ is one with cheque facilities
AS, AC	Access levels of an account + NRIC + OTP login ("A + I" in the pack); the pack does not expand them
AS400	The bank's host for logins, CIF, cheque status, stop payment and rates
BB, BBCSC	Business Banking; Business Banking Commercial Service Centre
BC	BizConn indicator on an account (p. 3); also the BC skillsets for fixed deposits and loans (p. 29)
BI	The BI skillsets in AACC: single skillset, by customer segment, Velocity, CPL, Investigate
CA	Current account
CBS, SOA	Core banking services, reached through the bank's SOA service layer
CFS	Consumer Financial Services (Malaysia)
CIF	Customer Information File number
CMM	The IVR's management database: prompts, hours, VIP list, promotions, forms, branches, call-backs, surveys, error phrases
CSO, SM	Customer service officer; service manager (the person a call is handed to)
CTI	Computer telephony integration: the data that pops on the service manager's screen
DTMF	Keypad tones
FCY, FCA	Foreign currency; foreign currency account
FD, TD	Fixed deposit; time deposit
FPX	Malaysia's online direct-debit payment network
NRIC	Singapore national identity card number
OTP	One-time password, sent by SMS

Term	Meaning
P	Phone code login ("P + T" in the pack: phone code and TPIN)
SR	Service request in Siebel, with type, category and sub-category
TPIN	Telephone (phone banking) PIN
Velocity	OCBC's business internet banking service
Agent (Weave)	One configured voice agent, answering one family of phone numbers
Specialist (Weave)	A part of an agent that handles one group of services; the front desk hands calls to it
Task (Weave)	A step-by-step flow checked in code, such as verification; the AI model cannot skip it
Tool (Weave)	One action on a bank system, with preconditions that decide when it may run
Fixed line (Weave)	A prompt with set wording in every language, kept with its IVR number

Appendix B. Fixed-line catalogue

Every numbered prompt in the SG call flow (pp. 1–48), as it becomes a fixed line. Lines marked "{{…}}" take a value. Key prompts 2001–2011 ("press 1" to "press *") and 2103 ("press #") are shared by every menu. The MY pack has no prompt numbers; its wording is in Malaysia hotlines in detail.

No.	Words	Page
1001 / 1002 / 1003	Good morning / afternoon / evening. Welcome to OCBC PhoneDirect Service	1
1004	We have recently upgraded our phone system to make it more user friendly	1
